Nicolas Bayona

Systems engineering student passionate about technological
stuff and the use of technology to improve people's lives.

Education

2019-2023 (expected):
BSc, Systems engineering; Pontifical Xaverian University (Bogota, Colombia)

- Final project title: Still not sure :C

Experience

Volunteer Work Experience:

Academic mentor at Pontifical Xaverian University:

- As an academic mentor at the university I was in charge of:
  - Welcoming new coming students to a new stage in their lives.
  - Helping the new coming students in their adaptation process.
  - Tell students about my experience as an student so far, my greatest challenges and important lessons I learnt throughout my life.
  - Act as a leader to new coming students, so that they felt they were accompanied in their adaptation processes.

Technical Experience

Most of my technical work is in my GitHub profile, you can visit my profile at `https://github.com/nclsbayona`

My Cool Side Project:
For items which don't have a clear time ordering, a definition list can be used to have named items.

```
* These items can also contain lists, but you need to mind the
  indentation levels in the markdown source.
* Second item.
```

Open Source:
List open source contributions here, perhaps placing emphasis on the project names, for example the **Linux Kernel**, where you implemented multithreading over a long weekend, or **node.js** (with **link**) which was actually totally your idea…

Programming Languages:
C++: Here, we have an itemization, where we only want to add descriptions to the first few items, but still want to mention some others together at the end. A format that works well here is a description list where the first few items have their first word emphasized, and the last item contains the final few

emphasized terms. Notice the reasonably nice page break in the pdf version, which wouldn't happen if we generated the pdf via html.

Python: Description of your experience with second-lang, perhaps again including a [link] [ref], this time placing the url reference elsewhere in the document to reduce clutter (see source file).

Java: We both know this one's pushing it.

Basic knowledge of other programming languages like *TypeScript, JavaScript, C, Dart* and *Swift*.
As well as markup languages such as *YAML, HTML, XML* and *JSON*.
And tools like **Kubernetes - Kubectl, Docker - Podman, Github Actions, AWS**.

Aditional information

- Human Languages:
    - Spanish (Native speaker)
    - English (Fully-conversational)
